

QADemo E-Commerce Application

1. Product Overview

QADemo is a testing e-commerce website designed to simulate a real-world online shopping experience. The website offers a variety of products that customers can browse and purchase.

Customers can add multiple products to their shopping cart and complete the purchase in a single checkout process, rather than purchasing each product separately. The system also provides an Admin Panel where administrators can log in, manage orders and prepare pending orders for delivery. This allows administrators to efficiently manage the overall order and product workflow of the website.

2. Purpose of the Application

The primary purpose of this application is to provide customers with a satisfying, convenient and user-friendly shopping experience. The application is designed to make the shopping process simple and efficient, allowing customers to easily browse products, access accurate product information, as well complete their purchases smoothly.

The application also provides administrators with effective tools to manage and maintain the website, including proper product verification, product information management and overall product administration. This helps ensure that customers receive accurate, reliable along with up-to-date product information while maintaining the quality and integrity of the platform.

3. Target Users

The application is primarily targeted at customers interested in purchasing gadgets and electronic products online. This includes:

- General consumers looking for gadgets and electronic devices for personal use.
- Technology enthusiasts interested in exploring and purchasing the latest gadgets and accessories.
- Online shoppers who prefer a convenient and user-friendly platform for browsing products and making purchases.
- Administrators responsible for managing products, verifying product information and maintaining the overall website.

4. Application Modules

The application is divided into several functional modules that cover the main activities of customers and administrators.

4.1 Authentication

This module handles user registration, login, logout and account-related access control. It ensures that users can securely access the appropriate features based on their account type.

4.2 Product Management

This module manages the browsing, searching, viewing and administration of products. Customers can view product details, while administrators can add, update, verify and manage product information.

4.3 Shopping Cart

This module allows customers to add products to the cart, view selected items, update quantities, remove items and review the cart before checkout.

4.4 Checkout

This module handles the process of placing an order. Customers can review their selected products, provide or select delivery information, choose an available payment method and confirm their purchase.

4.5 Order Management

This module manages customer orders throughout the order lifecycle. Customers can view their order details with status, while administrators can manage and update orders as required.

5. User Roles

The User can browse and view available products on the website, add desired products to the shopping cart or purchase products directly. Users can also proceed through the checkout process to complete their purchases.

Admin users can manage products, categories, users, inventory and orders. Admin-only features and pages are restricted to authorized administrators.

6. Main User Journey

Visit Website → Browse Products → View Product Details → Add to Cart / Buy Now → Checkout
→ Place Order → View Order Status

7. Initial Testing Scope

The initial testing will focus on the application's core functionalities, including:

- Authentication
- Product browsing and management
- Shopping cart
- Checkout and order placement
- Order management
- Basic input validation
