

QADemo E-Commerce Application

1. Product Overview

QADemo is a testing e-commerce website designed to simulate a real-world online shopping experience. The website offers a variety of products that customers can browse and purchase. Customers can view product information, add multiple products to their shopping cart, complete the purchase in a single checkout process rather than purchasing each product separately, complete an order and view order-related information.

2. Purpose of the Application

The primary purpose of this application is to provide customers with a satisfying, convenient and user-friendly shopping experience. The application is designed to make the shopping process simple and efficient, allowing customers to easily browse products, access accurate product information as well complete their purchases smoothly.

3. Target Users

The application is primarily targeted at customers interested in purchasing gadgets and electronic products online. This includes:

- General consumers looking for gadgets and electronic devices for personal use.
- Technology enthusiasts interested in exploring and purchasing the latest gadgets and accessories.
- Online shoppers who prefer a convenient and user-friendly platform for browsing products and making purchases.

4. Application Modules

The application is divided into several functional modules that cover the main activities of customers and administrators.

4.1 Authentication

This module handles customer login, logout and account-related access control. It ensures that customers can securely access the appropriate features based on their account type.

4.2 Product Browsing and Information

This module manages the browsing, searching and viewing of products. Customers can view product details like price or availability.

4.3 Shopping Cart

This module allows customers to add products to the cart, view selected items, update quantities, remove items and review the cart before checkout.

4.4 Checkout

This module handles the process of placing an order. Customers can review their selected products, provide or select delivery information, choose an available payment method and confirm their purchase.

4.5 Order Management

This module manages customer order information after an order is placed. Customers can view their order details and track the current order status.

5. User Roles

The User can browse and view available products on the website, add desired products to the shopping cart or purchase products directly. Users can also proceed through the checkout process to complete their purchases.

6. Main User Journey

Login → Browse/Search Products → View Product Details → Add to Cart → Checkout → Place Order → Order Confirmation → View Order Details → View Order Status

7. Initial Testing Scope

The initial testing will focus on the application's core functionalities, including:

- Customer authentication
- Product browsing and viewing
- Shopping and adding cart
- Checkout and order placement
- Order confirmation
- Viewing order details and order status
